

Comment

Pretty good midterm, but I almost woke up late. Problems 1 to 3 were expected but 4 was crazy, so I might try that in my own time instead.

Anyways, what do you think about customizing your own distro?

Eh? I've been dabbling in that, but got no ideas recently, so how about a Neokent rice? May I interest you in it being debian based? Arch based? Or maybe you want something less popular(OpenSUSE, freeBSD)?

What about your WM? I personally like i3, or maybe you want bspwm or something more...awesome(wm)? Then there's all the other stuff, shells, terminal emulators, etc. I don't think I can get a config done by the very busy finals week, but let's see?
